Trading

Mining

Startups (ICO)

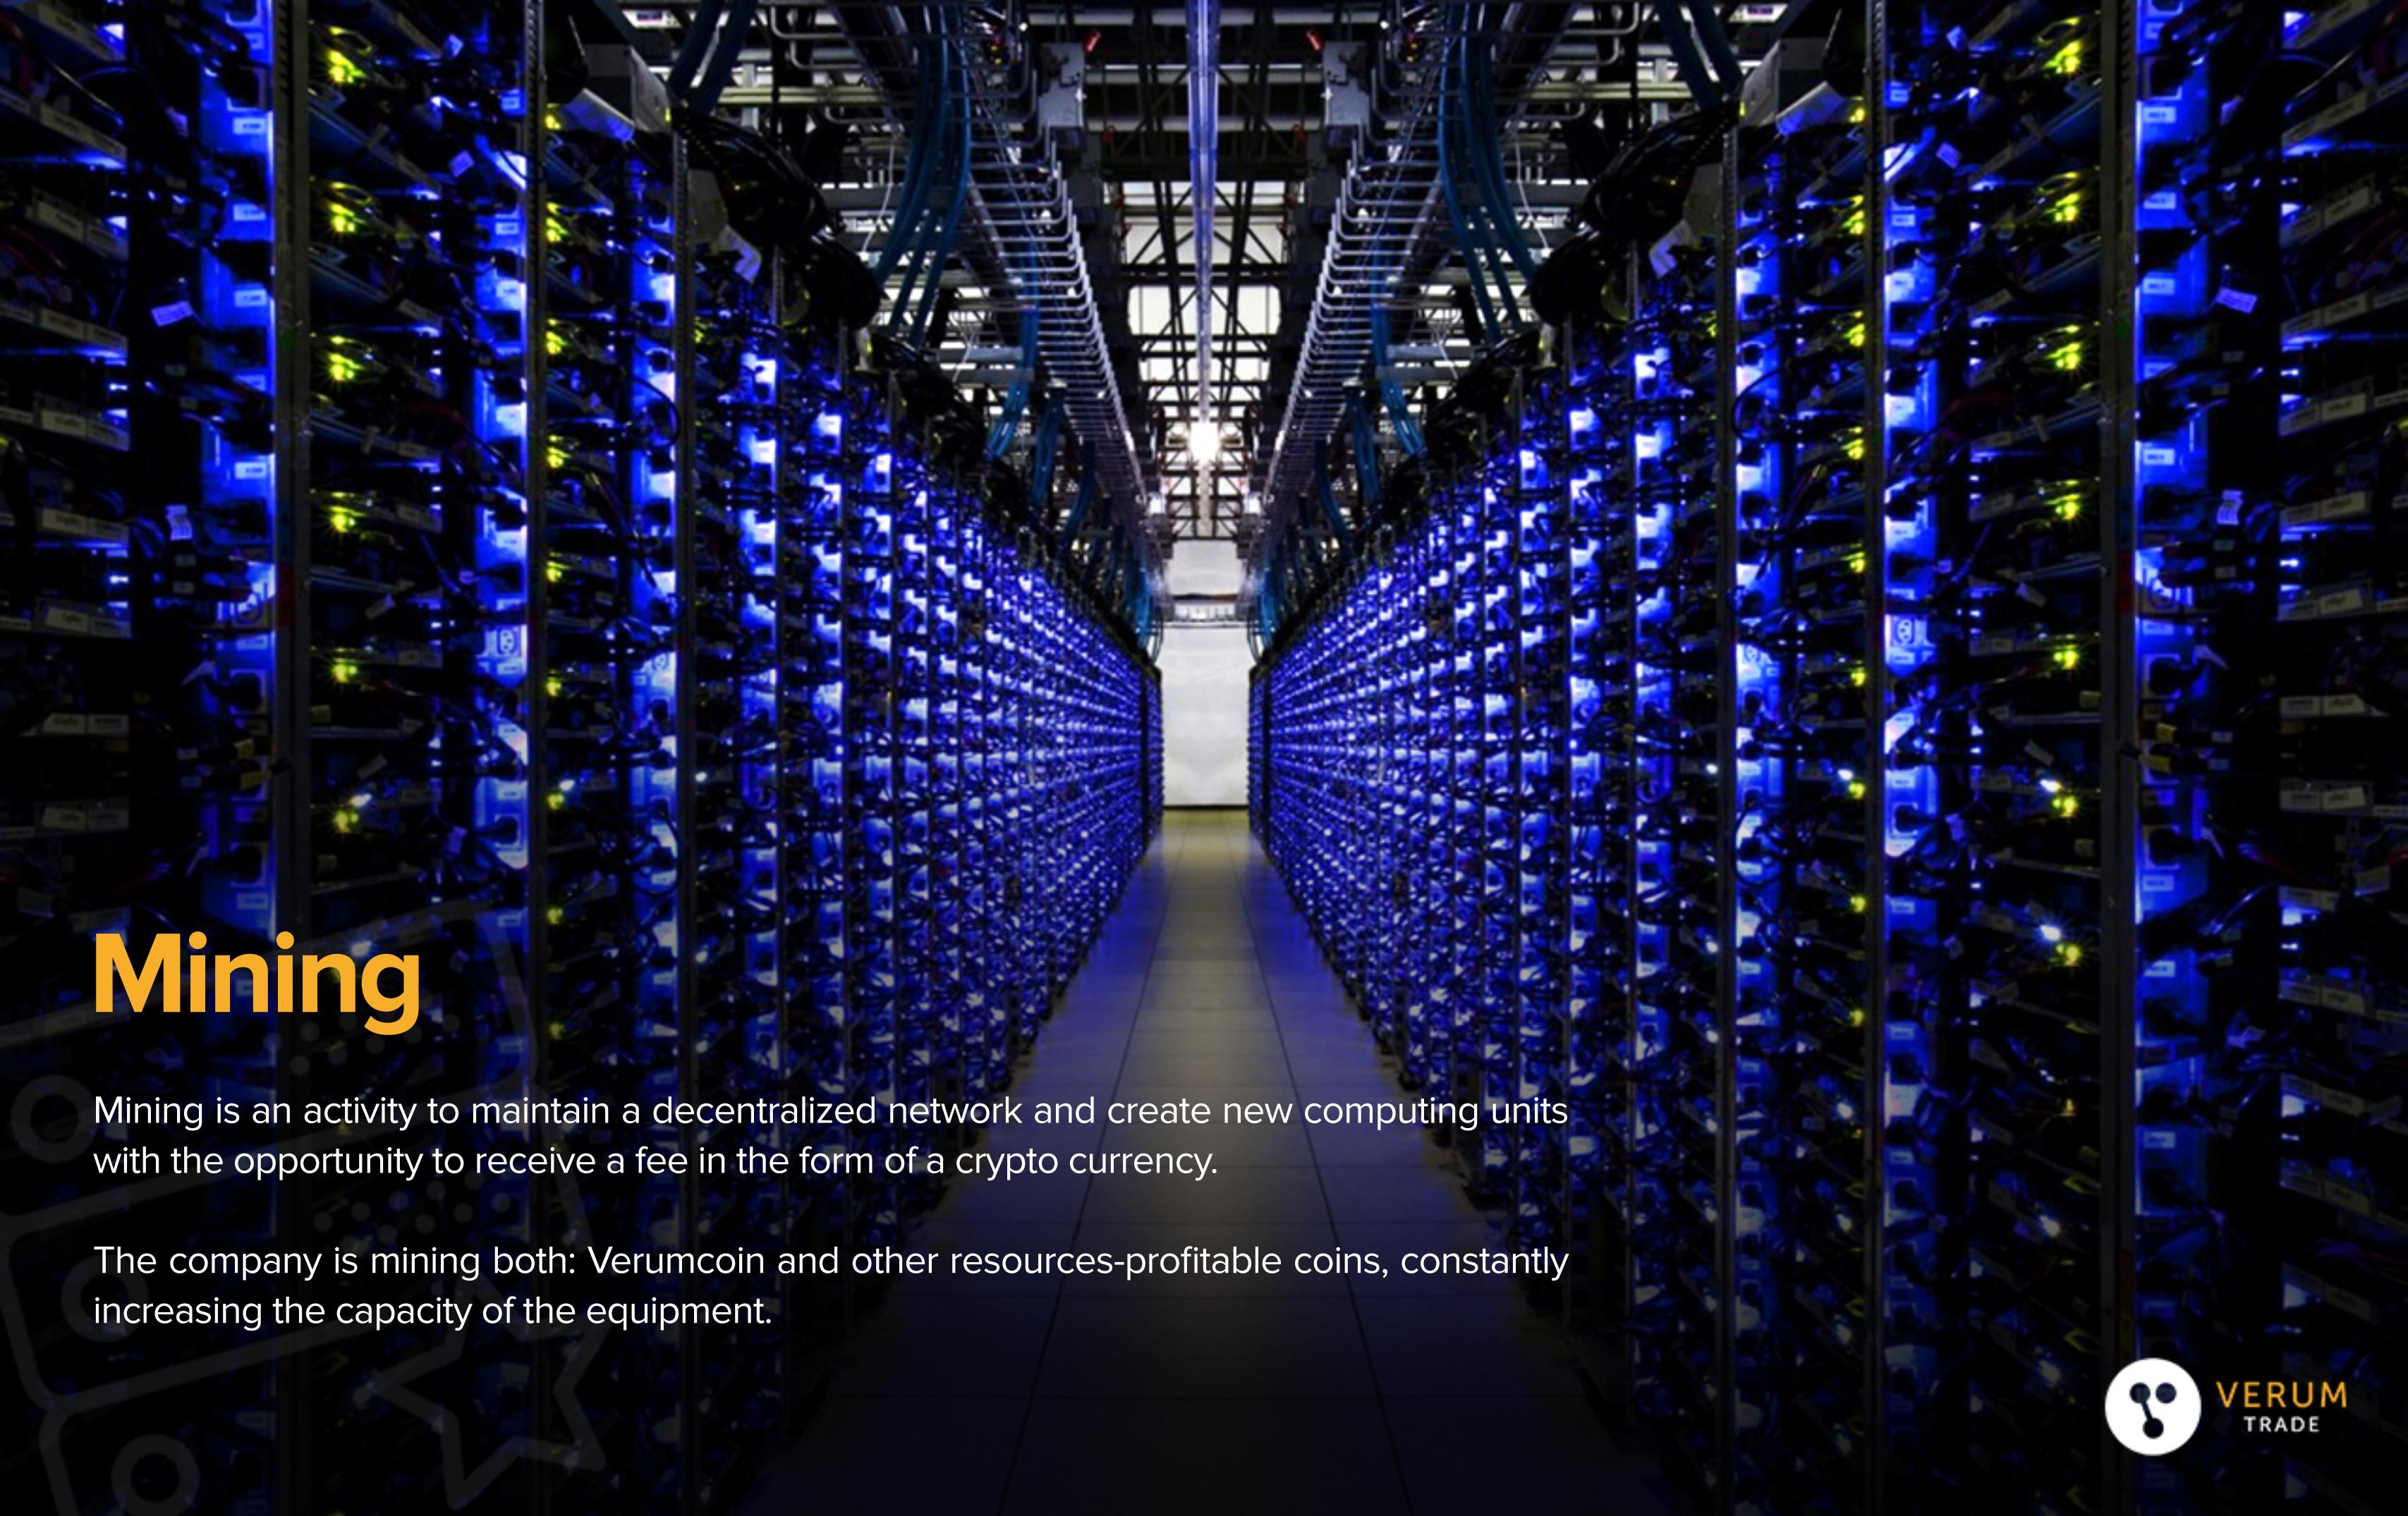

Own digital currency Verumcoin

Trading

The development of our investment portfolio by trading top crypto-currency pairs on the world's main sites.

Our group of traders with long-term trade experience and capital management, conducts constant monitoring of the world of crypto-currencies, studies trends, the functioning of the market, takes part in key conferences, works with insides. All that gives our team the opportunity to earn a stable profit for our investors.

Mining

Mining is an activity to maintain a decentralized network and create new computing units with the opportunity to receive a fee in the form of a crypto currency.

The company is mining both: Verumcoin and other resources-profitable coins, constantly increasing the capacity of the equipment.

Startups (ICO)

Constant monitoring and analysis of new ISO projects. Our investment department team is constantly searching and analyzing new start-ups, which makes it possible to make profit to our investors. We find the project, analyze, study, communicate with the developers and after this we make decisions to invest in the project or not.

Cryptocurrency VerumCoin

Implementation of the idea of VerumCoin in the community of crypto-currency, holding massive tutorial events, participation in conferences that popularize the cryptocurrency world.

Partnership with other global sites and interaction with the commerce market.

Promotion of VerumCoin in the circle of the trader community.

Development of a network of coin holders VerumCoin through a network of multi-level marketing (MLM)

Our Mission

Creation of Decentralized global blockchain with a focus on cyber security, payments & secure communications.

Advantages VerumCoin

Verumcoin works on a reliable and open Blockchain technology, a virtual database that can not be hacked, deleted or modified. The currency is transferred directly from person to person via the Internet, bypassing the bank, which significantly reduces the charge for the service. You can use Verumcoin in any country. Your account can not be frozen. No account details, documents and limits are required.

Technology **POW + POS**

ONE OF THE GOALS OF CREATING CRYPTO CURRENCY ON HYBRID TECHNOLOGY POW +POS IS RELIABILITY. EACH TECHNOLOGY HAS ITS OWN PROS AND CONS WHEN SEPARATELY, BUT IN ORDER TO ENHANCE THE SECURITY OF THE NETWORK - VERUMCOIN HAS BEEN CREATED, WHERE HACKERS WILL NEED MORE THAN 51% OF POWER AND MORE THAN 51% OF COINS TO HACK THAT IS ACTUALLY IMPOSSIBLE.

Proof of Work (POW)

- 1) The proof of the work is the requirement to determine an expensive computer calculation, also called as mining
- 2) The remuneration is granted to the first manner, which solves every problem of the block
- 3) Network masters compete for the first time to find a solution to a mathematical problem

Proof of Stake (POS)

- 1) The creator of a new block is selected in a conceptual way, depending on the number of coins in the wallet, and also the rate of accruals
- 2) In the POS system there is no reward for the block, the miners charge a transaction fee

VerumCoin paves the way
In cyber security applications and innovation!

VerumWallet

Available on operating systems such as:

Mac OS

Windows

Linux

Mining VerumCoin

To earn on the VerumCoin Mining, you can use one of the proposed types of mining POW or POS

POW
CLASSIC
MINING

Download
VerumCoin purse
from the official
website

Install and
configure
equipment for
mining

Connect with
pool verumcoin

3
